

OUR SERVICES

AI & Automation · Capability Statement · 2026

WHO WE ARE

Weigh Anchor is a Service-Disabled Veteran-Owned Small Business. We engineer and automate the systems that run the built environment, delivering workflow automation, business process engineering, and AI implementation for organizations whose operations have to work.

CORE SERVICES

Workflow Automation

Manual to automated. Dashboards, reporting, workflow design, and system integration built around how your team works.

AI Implementation

AI deployed where it earns its place. We start with process and automation, then layer AI only where determinism isn't enough.

Business Process Engineering

Map how work flows, identify bottlenecks, design better systems. Software-agnostic.

Construction Technology

Digital project controls, automated reporting, and field-to-office integrations for construction operations.

Change Management

Training, documentation, and adoption support. Your team owns what we build.

REPRESENTATIVE EXPERIENCE

DOMAIN	SCOPE
Enterprise Automation	Embedded team delivering 100+ automations per project for a Fortune 500 client. Workflow design, dashboards, and predictive analytics.
Enterprise Software	EHSS platform consolidation for a global pharmaceutical company. Chemical inventory system migration, license audit, user access redesign, and staff training across multiple sites.
AI Tools	Built and operate the #1 ranked construction GPT in the ChatGPT store, ~30,000 users.
Construction & Infrastructure	40+ construction projects managed across remote and rural communities for a federal client. Program development, project controls, and strategic use of technology as a force multiplier.
Program Development	Procurement program standup, process design, and construction management operations across Pacific territories.
